

## AI Healthcare Summary Report

Patient exhibits symptoms of seasonal allergies including sneezing, runny nose, and itchy eyes. No fever or other signs of infection observed. Past medical history includes mild asthma, well-controlled with inhaler.

### **Gemini's Treatment Recommendations:**

Based on the reported symptoms and medical history, it is recommended to:

1. Continue current asthma medication regimen.
2. Consider over-the-counter antihistamines (e.g., Cetirizine or Loratadine) for allergy relief.
3. Advise regular saline nasal rinses to help clear allergens.
4. Suggest avoiding known allergens if possible.
5. Recommend consulting a healthcare professional if symptoms worsen or do not improve with self-care measures.
